**SINGLE POINT
SOLUTION COMPANY**

World Class Engineering

- World class engineering set up with team strength of 300+ engineers
- In-house set-up for FEED, Basic & Detailed Engineering
- Latest Tools & Software: PIRS, AUTOCAD, HTRI, PRIMAVERA, PV Elite, ISOMAC, ProSteel, STAAD.Pro
- Plant 3D modeling through PDMS and Solidworks

State-of-the-art Manufacturing

115000 sqm state-of-the-art heavy fabrication facility
Cold rolling capacity of 100 mm and handling capacity of 200 ton

Certifications: ISO9001:2008, ISO14001:2004 & OHAS 18001:2007

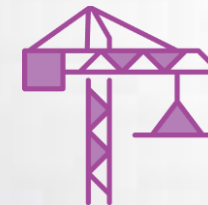

ASME, U,U2, R, IBR accreditation

Swedish R&D Facility

R & D facility in Sweden for specialty chemicals

Proprietary technology for hydrogen peroxide and sulfuric acid

International Quality Construction

- Construction team of 200+ professionals with global experience
- Proven track record of delivering projects with international quality and standards
- Experience of working with international PMCs

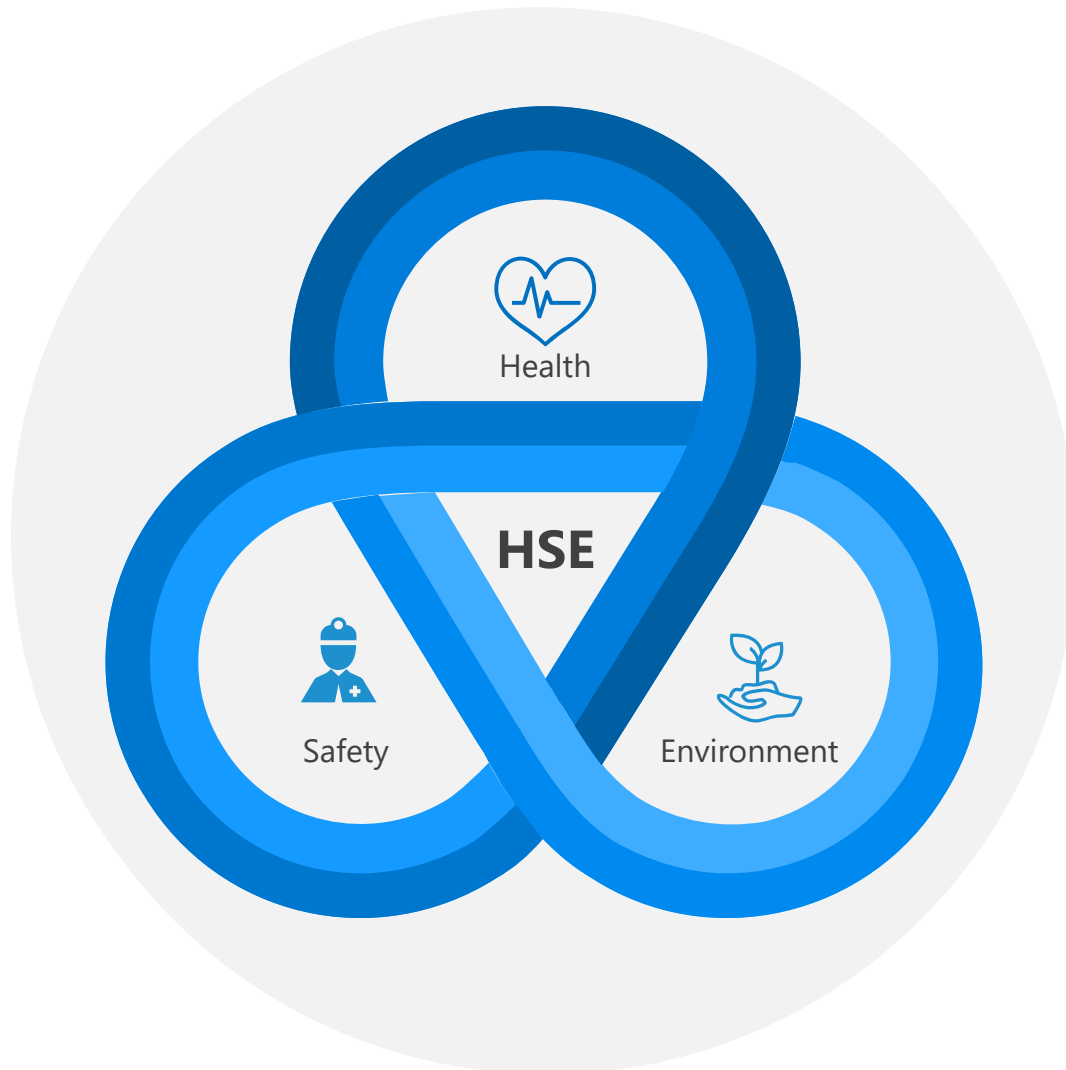

Global Knowledge Base

Global experience in working with local codes, norms and standards

Executed more than 60 turnkey projects in 30+ countries

Strong global knowledge base with industry experience of over two decades

Health and Safety

Nuberg EPC is committed to provide protection against health and safety risks for its employees and all other stakeholders involved in completion of a project. We take stringent actions required to provide a safe environment for all stakeholders thereby minimizing the hazards. A proper management of risks control is the only solution for a safe environment and in Nuberg EPC we follow every aspect of risk control with integrity.

Stringent international quality and safety process standards are maintained. All major international certifications and accreditations are in place. We follow a world class HSE policy and safety is a paramount attitude we foster towards every team member working on projects. **With zero accident since its inception in 1996, Nuberg EPC takes pride in being considered as one of the safest contractors.** This repositions the company as one of the leaders in EPC industry.

The background features industrial structures, including a tall tower and various pipes. A sign on the left reads "TOP PRIORITY WEAR PPE'S". The entire image has a blue overlay.

Project Execution and Management Methodology

Project Methodology

Schedule

Microscopic planning and scheduling activities to the last point.

Budget

Proper planning and regular execution monitoring are prerequisite to control budget.

Quality

Essential for customer satisfaction and plant life.

01 Scope

Clear scope and brief keeps project in budget and time.

02 Planning

Planning all activities for better execution.

03 Monitoring

Tracking and reporting details minutely for quality delivery.

04 Engineering

Dedicated teams, equipped with latest technology and software, to deliver safe, sustainable and cost efficient plants.

05 Procurement

Procurement team compliments processes for quality and timely execution.

06 Construction

Specialized teams and approved contractors with global experience deliver faster and better.

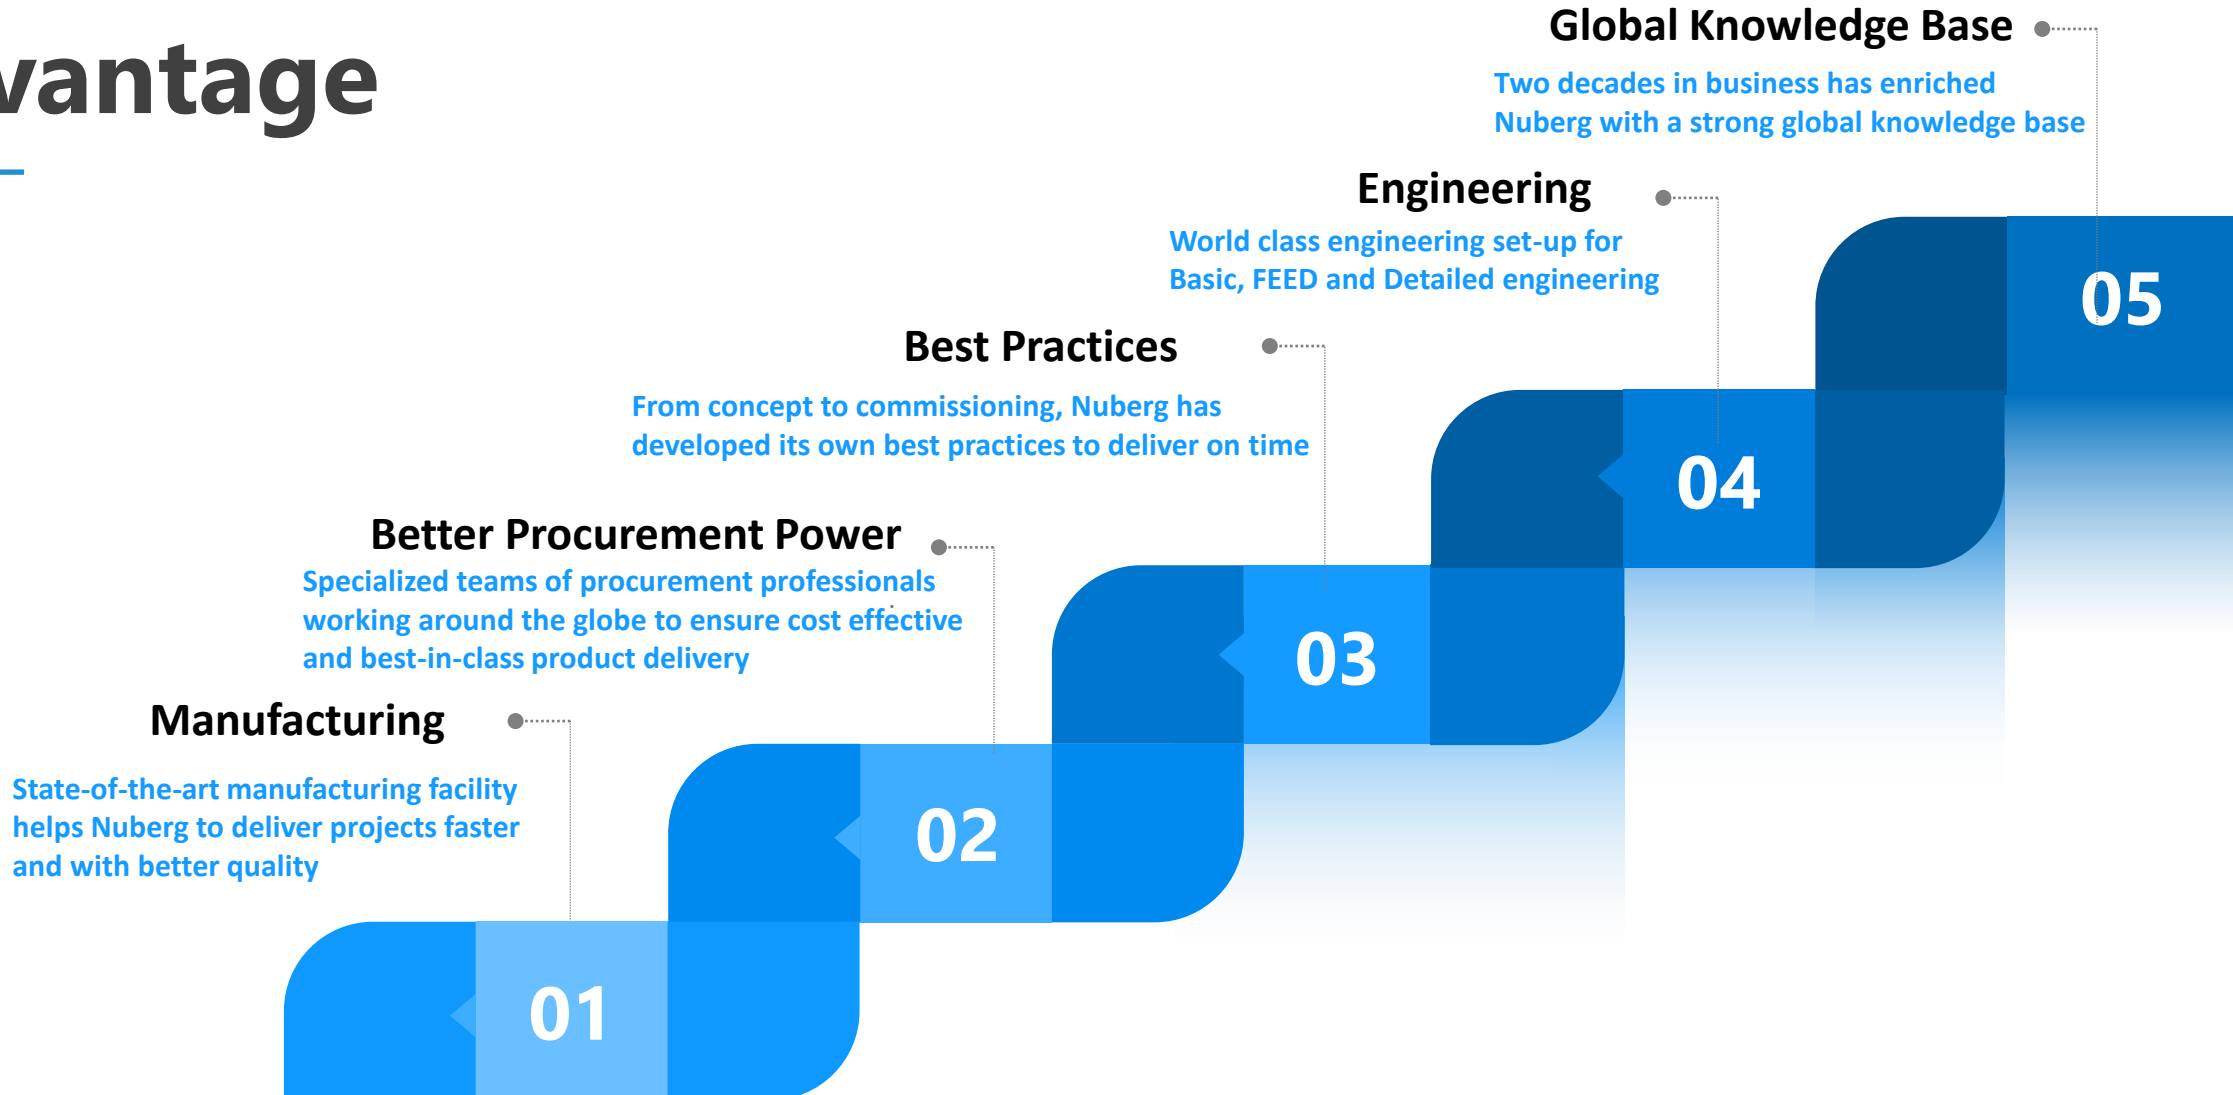

07 Commissioning

Dedicated and experienced teams for smooth commissioning, training and handover of project.

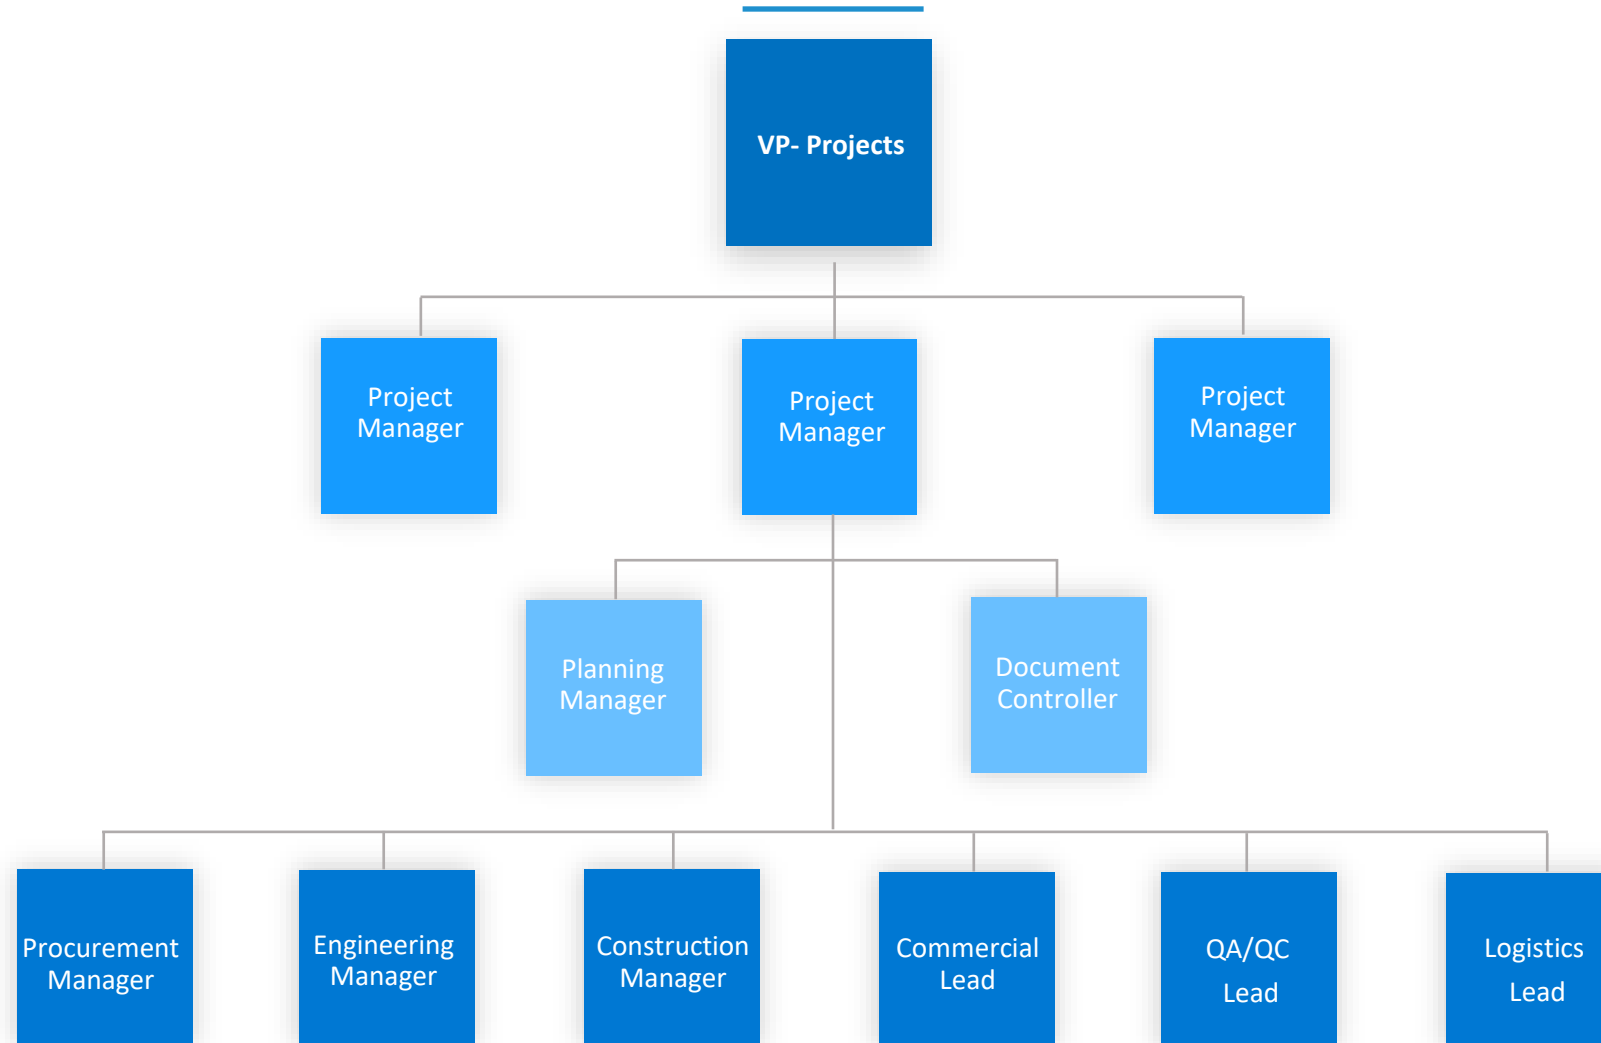

08 HSE & Quality

HSE, quality control and audit is of paramount importance and integral part of project life cycle.

FOOD

- Vitamin B1 & B6
- Herbicides

Drivers, Opportunities & Challenges

Drivers

- Higher growth in end-user industries, Water Treatment, Organic & Inorganic Chemicals, EDC/PVC, propylene oxide, and pulp & paper industries in Asia.

Opportunities

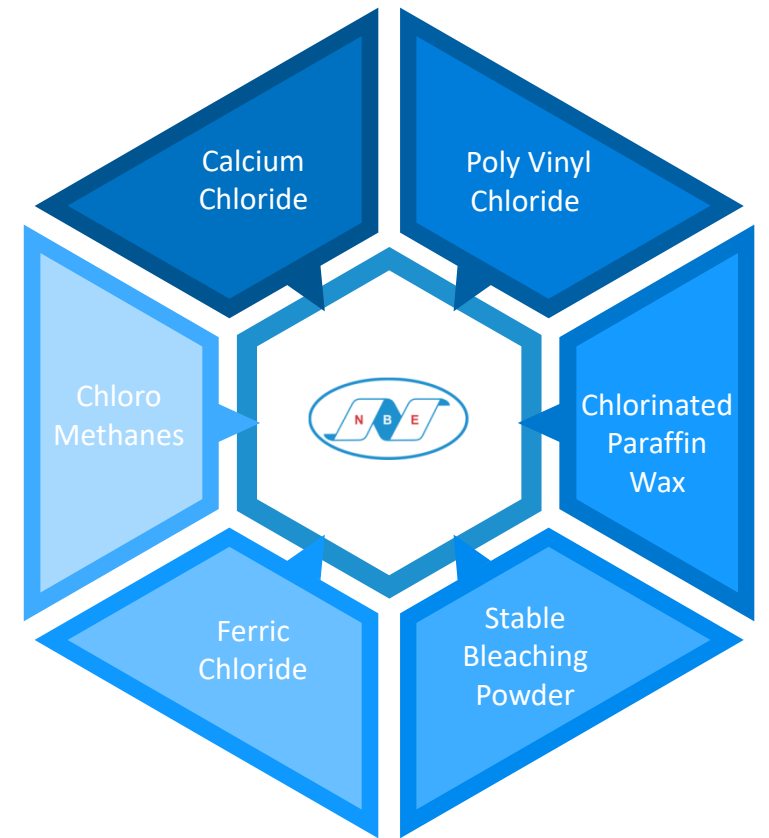

- Chlorine based products can tap new markets.
- Diversified product portfolio offers better potential for optimizing operating costs.
 - Downstream products can set the right direction for the future business approach.

Challenges

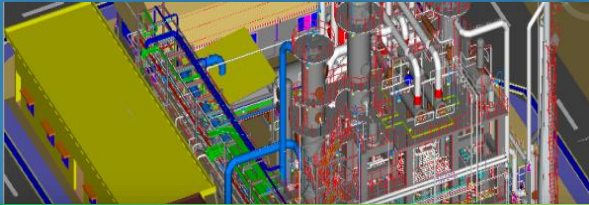

- Uncertainty in demand for liquid chlorine.
- Points of sales either non-existent or limited at many locations.
- Difficulties with long distance transportation of Chlorine because of its hazardous nature.
- Negative impact on project feasibility / operating cost due to the above.
- High cost of Chlorine puts a negative impact on Caustic Soda.

Nuberg EPC's Vision Today & Tomorrow

- Nuberg has strongly established its leadership in Caustic Chlorine industry.
- Nuberg has plans to expand its portfolio to provide the solutions of the downstream integration of the Caustic Chlorine process.
- Caustic soda has provided most of the return on the investment in the last several decades but chlorine has been making only modest contributions.
- The usual by product of Chlor Alkali process is Hydrochloric Acid which has storage & export limitations. Moreover, the value addition down the chain is not much for Hydrochloric Acid.
- Few of the products which offer much higher realization in the value chain and so at our immediate attention are:
 - Calcium Chloride
 - Stable Bleaching Powder
 - EDC to PVC
 - Ferric Chloride
 - Chlorinated Paraffin Wax
 - Chloro Methanes

Indian firm awarded EPC contract for Abu Dhabi chlor-alkali expansion

1:34 PM GMT | October 10, 2014 | Francinia Protti-Alvarez

Nuberg Engineering (Noida, India) says it has been awarded a \$15-million chlor-alkali engineering, procurement, and construction (EPC) contract by salt company Al Ghathil Industries (Abu Dhabi). The project will double Al Ghathil's caustic soda production capacity to 280 mt/day. Nuberg Engineering was awarded an EPC contract for the 140-m Uday first phase of Al Ghathil's project, worth \$19 million, which is being commissioned. The second phase of the project is scheduled to start production in the first quarter of 2015. The plant will also make coproducts, such...

HYDROCARBON PROCESSING

Nuberg wins \$20 MM EPC contract for Calcium Chloride Plant in Egypt

9/27/2016

Nuberg, a global EPC & LSTK company for specialty chemicals has won a calcium chloride plant project on EPC & LSTK basis in Port Said, Egypt from TCI Sarman Chemicals. TCI Sarman is a part of the multinational conglomerate, The Sarman Group headquartered in China. India, it is amongst the largest caustic soda manufacturers in Egypt's chemical industry.

The calcium chloride granules project's annual production capacity is 135 Mt/yr and is valued at \$20 MM. Nuberg's scope of work includes plant design, detailed engineering and procurement of complete chemical equipment for TCI Sarman for the anhydrous calcium chloride pellets/granules production at its site in Port Said (Egypt).

The technology supplier for the chemical plant is Zira from Russia, a global calcium chloride technology provider. Zira's responsibility is to transfer the technology of production of liquid & anhydrous product and to provide basic engineering and technical regulation documents. The plant commissioning is planned to be by the end of 2017.

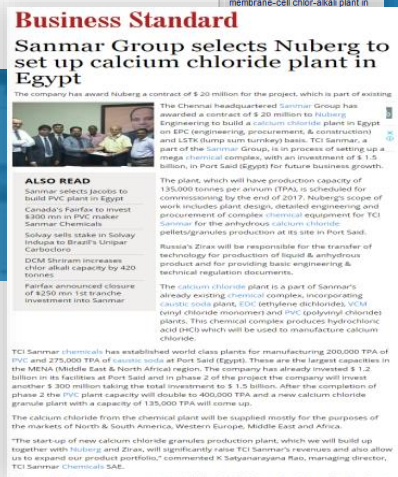

The calcium-chloride plant is a part of Sarman's already existing chemical complex, incorporating caustic soda plant, EDC (Ethylene Dichloride), VCM (Vinyl Chloride Monomer) and PVC plants. This chemical complex produces hydrochloric acid (HCl) which will be used to manufacture calcium chloride (CaCl₂).

TCI Sarman Chemicals has established world class plants for manufacturing 200 Mt/yr of PVC (Polyvinyl Chloride) and 275 Mt/yr of caustic soda at Port Said (Egypt). These are the largest capacities in the MENA (Middle East & North Africa) region. The company has already invested \$1.2 Bn in its facilities at Port Said and in Phase 2 of the project the company will invest another \$300 MM taking the total investment to \$ 1.5 Bn. After the completion of phase 2, the PVC plant capacity will double to 400 Mt/yr and a new calcium chloride granule plant with a capacity of 135 Mt/yr will be constructed.

The calcium chloride from the chemical plant will be supplied mostly for the purposes of the markets of North & South America, Western Europe, Middle East and Africa.

"The start-up of new calcium chloride granules production plant, which we will build up together with Nuberg and Zira, will significantly raise TCI Sarman's revenues and also allow us to expand our product portfolio," commented K. Srinivasan Rao, managing director, TCI Sarman Chemicals SAE.

"We are quite happy of our cooperation with Zira for TCI Sarman's calcium chloride plant

Business Standard

Sanmar Group selects Nuberg to set up calcium chloride plant in Egypt

The company has awarded Nuberg a contract of \$ 20 million for the project, which is part of existing

The Chemical headquartered Sarman Group has awarded a contract of \$ 20 million to Nuberg Engineering to build a calcium chloride plant in Egypt on EPC (Engineering, Procurement, & Construction) and LSTK (Lump Sum Turnkey) basis. TCI Sarman, a part of the Sarman Group, is in process of setting up a large chemical complex, with an investment of \$ 1.5 billion, in Port Said (Egypt) for future business growth.

The plant, which will have production capacity of 135,000 tonnes per annum (TPA), is scheduled for commissioning by the end of 2017. Nuberg's scope of work includes plant design, detailed engineering and procurement of complete chemical equipment for TCI Sarman for the anhydrous calcium chloride pellets/granules production at its site in Port Said.

Russia's Zira will be responsible for the transfer of technology for production of liquid & anhydrous product and for providing basic engineering & technical regulation documents.

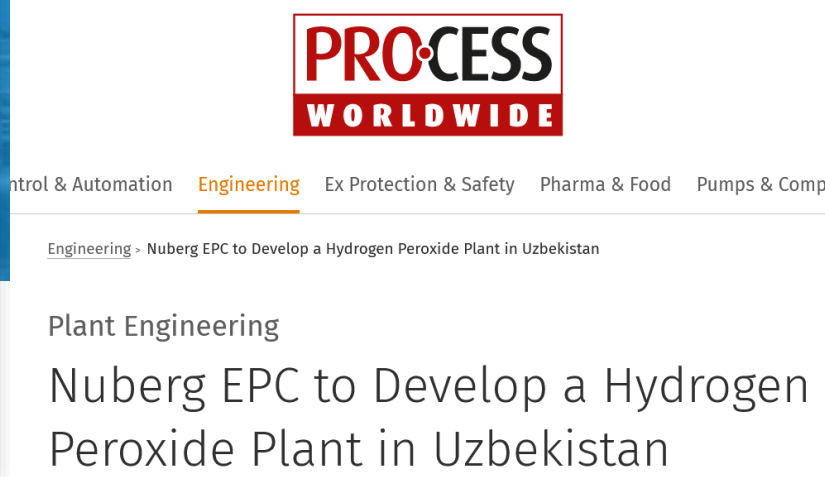

The calcium chloride plant is a part of Sarman's already existing chemical complex, incorporating caustic soda plant, EDC (ethylene dichloride), VCM (vinyl chloride monomers) and PVC (polyvinyl chloride) plants. This chemical complex produces hydrochloric acid (HCl) which will be used to manufacture calcium chloride.

The company announced closure of \$250 mn 1st tranche investment into Sarman.

The calcium chloride from the chemical plant will be supplied mostly for the purposes of the markets of North & South America, Western Europe, Middle East and Africa.

"The start-up of new calcium chloride granules production plant, which we will build up together with Nuberg and Zira, will significantly raise TCI Sarman's revenues and also allow us to expand our product portfolio," commented K. Srinivasan Rao, managing director, TCI Sarman Chemicals SAE.

"We are quite happy of our cooperation with Zira for TCI Sarman's calcium chloride plant

NUBERG WINS \$35 MILLION EPC CONTRACT FOR SAUDI ARABIA CHEMICAL PLANT

India's Nuberg Engineering Ltd has won an EPC (Engineering, procurement and construction) and fabrication contract for a new chemical plant in Saudi Arabia.

India's Nuberg Engineering Ltd has won an EPC (Engineering, procurement and construction) and fabrication contract for a new chemical plant in Saudi Arabia.

Nuberg said that the \$35 million contract from industrial services company ADDAR includes residual engineering, procurement, supply, construction, fabrication and commissioning. The greenfield plant will be constructed in Jubail Industrial City, the largest industrial city in the Middle East and home to several other chemical and petrochemical plants.

The facility will produce sulfonate and other specialty chemicals for the local Saudi market as well as the wider Middle East, Africa and Gulf Cooperation Council (GCC) region. It may also deliver to markets in Eastern Europe, India, China and South East Asia.
